

Dual Gamma Ray

Description

The Dual Gamma Ray Tool employs two sensitive iodide sodium scintillation crystals and two photomultiplier tubes to detect gamma ray radiation. Use the tool to correlate to the surrounding lithology of the well.

Dual Gamma Ray logs are useful for recording induced radiation. A tracer log can determine fluid movement by tracing radioactive iodine ejected into the wellbore.

- Two scintillation crystal gamma ray detectors
- Detects naturally occurring and artificially induced gamma ray radiation
- Correlates surrounding lithology

Specifications

OD	1.375 in. (3.5 cm)
Length	67.5 in. (171 cm)
Weight	16.3 lb (7.4 kg)
Temp. Rating	350°F (177°C)
Pressure Rating	15,000 psi (103.5 MPa)

Part Number: AM012UU0002
