

# Pressure Verification

## Application

DataCan's Pressure Verification Assembly is a bench test for memory gauges to verify operation through a range of pressures. The assembly uses high-pressure ¼" tubing connections throughout, allowing the customer to test the memory gauge up to 20,000 psi.

## Features

- Quartz Reference (Accuracy = 0.02% Full Scale)
- Economical
- Verify Pressure Gauge Data

## Pressure Verification Assembly

Pressure	Temperature	Part No.
20,000 psi	85°C	104296

## Accessories

Accessory Type	Part No.
1.375" Welded Piezo IV Calibration Sub	101242
0.75" Quartz DXB Calibration Sub	100957
1.25" Piezo Calibration Sub	100664
0.75" Piezo Calibration Sub	100818
