

SRO

Suspended Carrier

Application

The SRO suspended carriers are used to house a DataCan permanent gauge inside of a shock and dampened protective housing. DataCan's SRO suspended carriers have shock absorbing springs and elastomer cushions and, for best results, can be filled with hydraulic fluid or inhibitor grease. This helps protect the gauges and extend the service life of the gauge downhole.

Benefits

DataCan's SRO suspended carrier provides protection to the permanent gauge and is an inexpensive insurance solution against high shocks, vibration, and downhole pressure gauge wear.

Features

- 1.25" OD
- Sweet or Sour Options
- Corrosion Resistant NACE MR0175
- Custom Box Connections Upon Request

1.25" SRO Suspended Carrier
